

2019 European Technical Symposium

Confirmed guest speakers:

Pedro Alves
Transversal Activities Manager -
EDPR

Alexander Tschirch
Project Engineer -
DEWI

Scaling up: key technical trends in O&M for 2019 and beyond

The ONYX InSight's [2019 EU Annual Wind Turbine Technical Symposium](#) is an exclusive two-day event for wind farm owners, operators, principal engineers, lead technicians and researchers. The Symposium will build on ONYX InSight's extensive practical experience supporting asset owners and operators in Europe, providing in-depth analysis into the key trends in on- and offshore wind power.

Focusing on the challenges the European sector faces as existing wind assets advance in age, and new infrastructure increases in scale and complexity, the event will provide analysis and recommendations on the topics of:

- How to **optimise operations offshore**
- Ensuring **safety in multi-contract scenarios**
- What exactly is **O&M best practice** and how can it be achieved?
- How to use **machine learning to improve** wind turbine **diagnostics and prognostics**
- Realising business value through **cloud solutions**
- Lessons learnt in **large-scale predictive maintenance**
- **End of Warranty** strategies

Our 2019 Symposium follows on from the successful [2018 European Technical Symposium](#) which featured prominent guest speakers from firms including UL Renewables and ZF Friedrichshafen.

Unlike a commercial conference or trade show, all discussions take place in confidence. This means no sales pitches, and more opportunity to focus on the issues that matter.

 **Manchester, UK**

 **March 27th- 28th**

 **Invitation only event**

ONYX InSight

ONYX InSight provides unbiased predictive analytics, underpinned by real-world engineering expertise, enabling clarity and better control for wind asset owners and operators in operations & maintenance decisions.
